

Academy for training the specialists in replays and multichannel recording

For simulation of camera signals the 2U Academy server is used. Arrow-V server with 14 SDI inputs and two Program outputs is used for recording and replays.

The Blackmagicdesign Video hub is used for switching video signals. The Blackmagicdesign ATEM Television Studio hd8 mixer is used to control the video production process.

The monitor displaying the Academy interface is also used to display the main interface of the Arrow-V server.
