

# Slomo.tv Launches Enhanced videoReferee® FC System at IBC2018

posted:18/07/2018

IBC2018, RAI Amsterdam  
The world's most influential  
media, entertainment &  
technology show

CONFERENCE | 13 - 17 SEPTEMBER  
EXHIBITION | 14 - 18 SEPTEMBER

Complete VAR system certified and recommended by FIFA; also popular with Ice Hockey, Basketball & Handball!

On its booth (8.B40) at IBC 2018, slomo.tv, a leading international supplier of cost-effective, high performance server-based video recording and replay systems, will introduce a complete integrated video assistant referee (VAR) system based on the latest generation of its videoReferee® FC. The system, which has been used for many years across sports such as ice hockey, basketball and handball has now been adapted to accommodate soccer's recently introduced FIFA obligatory requirements.

Designated videoReferee® FC, the compact 4U video server records up to 24 3G/HD channels and has four graphics outputs. It has a separate multi-viewer for all channels capable of displaying live and delayed video.

The system provides two fully functional and independent work places working with live, delayed for 2 seconds or recorded video. Using the system, sports referees can analyze in-play action frame-by-frame, simultaneously viewing the action from several different camera angles.

Video inputs can be displayed from a single camera, in Quad view (four cameras) or in multi-viewer format for off-site situations. Also, it is possible to quickly perform and prepare analysis of an on-pitch incident at the assistant's work place (AVAR) and transfer it to the main on-pitch (VAR) system for referees to review during the match.

The videoReferee® based VAR system setup includes:

- Touch-screen monitors.
- Interfaces for integration with Vokkero Intercom system.
- Back-lit red and green buttons for simple event marking and controlling intercom with the referee on the field.
- vR-Keypad, which enables the assistant to intuitively mark and label in-play incidents for subsequent or immediate search.

SDI output for integration within a stadium's broadcast network.

“As we witnessed at the recent FIFA World Cup Finals, VAR technology can revolutionize live sports, taking a lot of pressure from the referees who operate in extremely stressful environments,” commented Michael Gilman, CEO of slomo.tv. “Our new version of videoReferee is already creating interest in the world of soccer and we believe it will interest numerous other sports administrators and broadcasters.”

### **About Slomo.tv**

Over the last decade, the company has successfully introduced

complete lines of high quality multi-channel professional video recording products. Slomo.tv has brought to market a number of effective solutions for tapeless video production technology. Its products became de facto industry standard in Eastern Europe and the Baltic region. Slomo.tv systems, such as Dominator and Simple R, are widely used on major TV channels, and the company's sports video judging system videoReferee®, has become an integral part of many sport arenas worldwide.
